

STONY PLAIN SUN.

Volume 10, No. 1

STONY PLAIN, ALBERTA, THURSDAY, MAR. 10, 1932

Week Number 100

A History of the Local School.

(Continued from last week.)

The incorporation of the town in 1900 necessitated changes in school affairs, and to satisfy the Town Act six good men and true, viz. Umbach, Imerson, Graham, Miller, Russell, Lindley, were named as a Board to manage school affairs—especially the teacher. But Miss Lee, with feminine independence, refused to be managed. She resigned, leaving a complicated matter of finance to be settled by the incoming Board.

The second man previously mentioned was T. P. Lindley, now on the school board. He was a bachelor, and therefore had a deeper knowledge of the feminine heart than his colleagues on the Board. He was a practical Economist, as evidenced by the report that while on the townstead, he solved the problem of wood cutting by shoving a poplar pole thru the window, into the open store, hauling it gradually in further as the end burned off, while he lay upon a couch reading *Economist*.

Such traits of character, developed in the bachelor solitude of the farm, yielded fruit in the influence he exerted upon civic matters in the next few years, in his capacity as school trustee, magistrate and member of board of trade and agricultural association. The local Demonstration Farm was largely due to his energy.

Settlement was amicably made with Miss Lee, and during 1900 the school was taught first by Mr. Latta, and later by Mr. Knecht. In Jan. 1910 Mr. Empey was on-

"The Part-time Husband"

All residents of Stony Plain district are taking a keen interest in the play "The Part-time Husband," to be presented on Friday March 27 at the Victoria hall. This is said to be a very stirring and exciting play, and will undoubtedly cause you sides to ache with laughter. Residents of Stony Plain and Comox districts are expected to attend in a body, as the majority of the participants in the play come from the Comox district.

Seed Branch Office Opened.

The Dominion Seed Branch at Calgary has opened an office in Edmonton, at Blaney Henry Bldg. This office has been provided so that better service can be rendered to the northern part of the province. Inspections of hay, feed and seed shipments are handled by this branch. All seed samples for testing should be sent to Calgary, as before.

Livestock Poolman Meet.

Establishing of a packing plant by the Livestock Pool at an early date was decided upon by the delegates of the A.C.P.A. in Edmonton last week. Last year's subscriptions were given by members; some capital funds are on hand. The pool is eligible for financial aid under the million dollar credit voted by Alberta for guaranteeing co-operative society activities in marketing, of which half is still unused. W.C. Turnbull, Oxyway, was elected a director in district 'D,' to succeed Donald MacLeod.

aged at \$85 per month as teacher, in which position he remained for 8 years.

In 1913 the growth of the town required the building of an addition 30' x 60' to the old room. This addition was made into 2 rooms, only one of which was immediately furnished and given into the charge of Miss L. Longstaffe, who after 18 months became a permanent resident on the basis of an permanent salary. Then followed Miss Macdonald, who occupied a room in the town hall while the third room of the school was being finished in 1915.

After short periods, under C.O. Green, J. Haggart, Miss MacLeod, the school moved in 1917 under the control of Mr. Macdonald, Miss Hall, Miss Knecht.

At this time Consolidated schools between Edmonton and the west, was tried out here. The system was not in motion in 1915 with 2 districts, with, but in 1923 in accordance with the W. H. H. principle of local self government, the system was carried to its conclusion, established here. Local district and its Group Three with 2 units, 1 room, and a staff of 4 teachers. A 5th teacher in the last year school completes the teaching requirements for our town which at the present time will benefit its student population of 100.

GET IT AT HARDWICK'S "IT COSTS LESS!"

Just Arrived—LADIES' SPRING HATS—due this week at the Special Hardwick Prices.

NEW SPRING DRESS GOODS, in lovely patterns, specially priced.

MEN'S WORK BOOTS, \$2.95, \$3.95. We have the famous "Greb." Once worn, wanted the next time.

MEN'S WORK SHIRTS, 98c. Regular up to \$1.75.

HARDWICK'S THE HOUSE OF QUALITY.

"...Put your new Pontiac is a beauty..."

YOU will find that everyone appreciates your taste and respects your judgment, if you drive the new 1931 Pontiac. The 1931 Pontiac is a larger car, a fine car, although it sells at lower prices. Observe, at our showrooms, Pontiac's distinctive V-shaped radiator, the graceful one-piece fenders, the sleek body and flow of its long, modern lines and the beauty of its spacious Fisher Body.

There are over 40 points of rubber insulation throughout the chassis to absorb engine noise and vibration, and to absorb road shocks. Such notable Pontiac features as Lowboy wheel clearance, one-piece fenders and big brakes are standard.

NEW LOW PRICES:
• Four Seater - \$2995
• Four Seater - \$2995
• Four Seater - \$2995
• Four Seater - \$2995
• Four Seater - \$2995
• Four Seater - \$2995
• Four Seater - \$2995
• Four Seater - \$2995

All prices at factory, exclusive of taxes, license, and delivery. The only reliable, modern, well and well built car included in standard equipment at these prices is the 1931 Pontiac.

PONTIAC

...a fine car, a modern car, a great value

E. H. PIDGEON STONY PLAIN.

Churchill Townsite Opening May Be Necessarily Delayed Until August Of This Year

Not until August—if at all this season—will Churchill, Manitoba's new Bay airport, be opened to the public. Officials of the Manitoba Government, masters of the townsite, are seeking to overcome problems which threaten to delay the town opening until August, a time so late it may be deemed better to wait until next season.

Chamoring "hundreds" are permitted to "get in on the ground floor" this summer at the rock-gilt terminal of the Dominion Government's Hudson's Bay Railway. Thousands here, adventurers, pioneers who tend irresistibly toward the north—these are the folk who are eager to be residents of Churchill when the British-based freighters first strain wheel-based across the Bay.

Opening of the town to the public will terminate the "engineers' paradise," which has existed since old Mike O'Brien's cabin going laid first about into Churchill in the howling March gale of two years ago. Entry into Churchill has been allowed only on special permit, and workers engaged in track-laying, house building and sewer construction have been under strict surveillance of their employers.

Beyond the establishment of a line of tanks and the operation of a sewer-walked move about blown down by the Bay gales, commerce has made virtually no appearance at the West's northern harbor. Food is served at the camp mess, sleeping quarters are provided, and work is there to be done; only here permission may be obtained by purchase, so that most workers finish a season at Churchill with a real "stake."

Provision of export of shipping at Churchill this fall, if only for a few weeks in late September and October, has occasioned a new rush of applications to set up businesses, better shops, restaurants and general stores at Churchill. The Dominion Government has pledged its effort to ship 750,000 barrels of wheat—three good-sized boat cargoes—this fall. Plans from Saskatchewan still ask shipments of as much as 5,000,000 barrels of wheat.

In planning a decision on the townsite opening, the Manitoba Government is understood to be most concerned with the question of whether adequate preparations for an ingress of major proportions could be made by the beginning of August. It is believed unlikely to permit settlement at a later date this season, but new residents to be sought equipped for the rigors of the sub-Arctic winter. Postponement until next spring may be considered advisable.

Fire protection regulations such among the most important matters to be settled in connection with the site proper especially if the water supply is to be limited; yet officials realize that too drastic regulations will meet with pronounced opposition from the rough-and-ready pioneer type certain to predominate among early Churchill residents.

Indications are that approval, or at least semi-approval, buildings will be demanded within the limits of a certain portion of the townsite proper, which will be located on the

rocky point forming the north side of the Churchill river's mouth. Possibilities that questions may set up their two or three board "shades" beyond the restricted area are few, none, regretted—but not immediately disposed of.

Present plans of the Dominion Government are to bring water from the Rainy Lake area, three miles south of the townsite, by means of a rubber siphon installed against winter cold.

Engineers who seek even greater assurance of permanent adequacy, never piping water from above tide-water on Churchill River, about seven miles upstream from the town. Technical opinion differs as to which is the better plan.

Use of pumping equipment in connection with pipes from above tide-water, some engineers claim, would provide unlimited water supply and reduce the hazard. Under this system, flow might be held in the river bed, out of the reach of frost, virtually an ever-present threat in the Churchill area.

Drainage of the townsite, to be laid out within a few hundred yards of the lowering 1,000,000-barrel grain elevator now under construction, is looked on at least partially as a problem. Water, seeping down from the ground surface, reaches the permanent frost line and is unable to penetrate further. It gathers along this level and if a rise in the frozen sub-stratum is encountered, the water comes to the surface, resulting in a permanently marshy area.

Beyond these major problems, the Manitoba Government must yet locate the main sewage plant, mark out the streets and avenues for the port north of '48, designate the location of the more important buildings to be located, and so on. Tentative decisions have been reached on most of the questions, but the uncertainty still remains as to whether Churchill can be kept in its first attempt to time to settle them comfortably for the cold weather.

Pete Is Eight-Nine Day

Penetration 104 Years Old Woman

An 89-year-old woman

In these times of general business depression and unemployment the great fear of Helene Bonnet, who works as a stitcher in a bookbinding shop in Paris, was that she might lose her job. She knows how hard it is to find work when you reach "a certain age."

It happens that Helene Bonnet has reached "a certain age." As a matter of fact, she is 104 years old, which does not prevent her from putting in an eight-hour day with the best of them. But she would never consent to tell her age. Neighbors and fellow workers imagined that she still entertained matrimonial hopes. They were hopelessly wrong. Helene loved the life of her job.

Pat To New Use

Playing Cards Are Now Being Made Of Aluminum

Aluminum is being used more and more for all sorts of purposes. It is being used for cables that carry electricity across country from power stations, in place of copper, and its latest use is in the making of playing cards.

There have for some time been talk and high and low the ordinary cards, except that they are a little heavier. In the open air they will not blow away as do those made of cardboard, and if they become wet they can easily be washed, which is a great advantage.

It is interesting to remember that aluminum, although one of the commonest of all metals, being found in clay, was only discovered as recently as 1825 by Frederick Wöhler, a German.

The United States supplies the world with practically all of its rubber articles and rubber latex.

More Balanced Production Of Livestock In Canada Is Need Of Agriculture

Herman "Wierd" Smith, Australian speed king, who will shortly make an assault upon Capt. Malcolm Campbell's world land speed record of 210 miles an hour, driving a car now under construction in Sydney, and with speed trials in New Zealand.

Opportunity In Sheep-Raising

Imports Of Mutton and Wool Record Production, Shows Are Told

With Canada consuming more mutton and using more wool than it produces, there is much opportunity for development. G. E. O'Brien, of the Co-Operative Wool Growers' Association, told the Ontario Sheep Breeders' Association at its annual meeting in Toronto. Mr. O'Brien stated that in the past 10 years Canada had increased from 1,000,000 to 1,500,000.

Canada consumed 57,000,000 pounds more mutton than she produced, Dr. J. H. Grisdale, Canada's Deputy Minister of Agriculture, told the association. Lamb's brought in for food purposes were inferior to Canadian lambs, he stated, and forecast some change in regulations governing imports of sheep and wool products.

Potato Harvest Of 1930

Average Yield Shows 'At 25.6 Cwt. Per Acre Of Land

The preliminary estimate of the total yield of potatoes in Canada, in 1930, is 45,100,000 cwt. from 174,000 acres, or 25.6 cwt. per acre, as compared with 38,000,000 cwt. from 148,000 acres, or 25.4 cwt. per acre in 1929, and 46,000,000 cwt. from 185,000 acres, or 24.9 cwt. per acre, in 1928. By provinces, the average yields in cwt. per acre are, in order, as follows: New Brunswick, 118.7; Nova Scotia, 113.9; Prince Edward Island, 105.9; British Columbia, 20.0; Alberta, 26.7; Manitoba, 26.7; Ontario, 25.4; Quebec, 28.0; Saskatchewan, 24.1.

TWO DEPEND VETERANS

Here they are, "Benny" and "Bert," old friends of 35 years' standing, although Bert has had 35 years and Benny Campbell, 30 years with the Canadian Pacific Express Company. His years of steady service in picking up and delivering goods for the company has given Bert such a knowledge of his route, which covers the area of northern Toronto around Bay and Adelaide Streets, that he looks up and down the streets without any help. Benny gives him no orders for he knows his route as well as his driver. But it has been Benny's steady riding that has carried on with his best delivery.

For several years farmers have been urged by those concerned in marketing farm products to take advantage of the many and varied fields open to them. In the last of that advice there was always the expressed desire to see more balanced production rather than the specialization in some single to the neglect of others.

The necessity of balancing production has been abundantly shown by the experience of the past months. Concentration on the export of grain, with a consequent draining of all policy in that direction, has been found to be unwise. When the inevitable day of low grain prices arrived there were not sufficient alternative sources of revenue.

If the advantage of having an alternative market for certain grains, for instance, had been kept steadily in mind a policy would have been framed that would have favored cheap and efficient distribution of feed to livestock farmers in this country. If such conditions had been fostered, farmers in consequence would have had a volume of hogs during 1929 and 1930, which would have made very good profits indeed in the export hogs market and have had reasonable margins of pigs to take care of a large part of the present crop of coarse grains, which is almost unsalable in the export markets. The export price for hogs is now very low but much of the grain that for some time has filled our elevators might have been marketed in the form of hogs before this happened.

In the meantime European countries have fostered hog production and with cheap feeds have reaped big profits for the past couple of years. Now there is a glut of this product on the British market. But with extremely cheap feeds there may be no let up of production. It seems certain that the cause of profit in hogs for this period has been stimulated by the countries that had their production expanded when prices were high.

Balanced production calls for an increase in livestock and livestock products in Canada, and the shaping of policies to that end. It does not, however, contemplate such things as wholesale raising into hogs for the mere purpose of selling up unsalable grain. When the grain situation straightens out export of grain will again form a very big part of Canada's business. But never again should it be permitted to engross attention

to the neglect of an increasing volume of livestock products.

Steadiness in volume of supply is of equal importance to the well being of the Canadian hog and sheep industry as quality of product.

History shows that the most startling element in production is that those now rushing into hogs will not "stick" if low prices for their first glut of product should give a temporary set-back and discouragement. A rash out of hogs next fall would again set up the old cycle of glut and shortage on perhaps a worse scale than ever.

Immediate prospects in the Canadian hog industry emphasize more than ever the need for more balanced production, less "putting of all eggs into one basket" in general, and less rushing into any one line that offers tempting prices merely because of conditions brought about by shortages rather than by the inherent value of the article. No sound industry can be built up if the bulk of producers quit when prices happen to fall and then come rushing back when prices rise in a way to create a glut and thereby again to discourage the market. Such a policy hurts those who stay, it steadily and gives no real profit in the "in and out."

The imperative necessity for a healthy agriculture in Canada now is better regulated and more balanced production of all livestock, so that steady markets may be developed for the products which livestock yield.

Dairy Industry In Canada

Domestic Consumption Of Dairy Products Rapidly Increasing

In a review of the dairy industry in Canada, Dr. J. A. Reddick, Dominion Dairy Commissioner, said that since 1921 domestic consumption of dairy products in Canada had increased to the extent of 154,528,347 pounds of butter fat equivalent. This is made up of an increase of 72,707,004 pounds in butter; 12,457,519 pounds in cheese; 2,541,242,034 pounds in milk, and 1,875,000 gallons in ice cream.

Trade With Russia

Canada's total imports directly from Russia last year were \$1,064,000, of which all but slightly over \$40,000 was the value of food brought in from Russia. Canada's imports the previous year totaled \$919,000. Exports to Russia from Canada in 1929 were \$1,000,000, and the year before, \$8,500,000.

How To Lose 24 Pounds of Fat

At the Same Time Gain in Physical Vigor and Youthfulness and Develop a Clear Skin and Vivacious Eyes that Baffle with Health.

Here's the recipe that banishes fat and brings into blossom all the natural attractiveness that every woman possesses.

Every morning take one-half teaspoon of Kruschen Salts in a glass of hot water before breakfast.

Be sure and do this every morning for "It's the daily dose that takes off the fat."—Don't miss a morning. Kruschen daily means that every particle of poisonous waste matter and harmful acids and gases are expelled from the system.

Modify your diet, and take gentle exercise. The stomach, liver, kidneys and bowels are tuned up, and the pure, fresh blood containing these salts is carried to every part of the body, and this is followed by "that Kruschen feeling" of energetic health and activity that is reflected in bright eyes, clear skin, cheerful vivacity and shining figure.

FREE TRIAL OFFER

If you have never tried Kruschen-salts it is now at your service. We have distributed a great many special "GIANT" packets which make it easy for you to prove our claim for yourself. Ask your druggist for the new "GIANT" 15c package.

This consists of one regular 75c. bottle together with a separate trial bottle—sufficient for about one week. Open the trial bottle first, put it to the test, and then, if not entirely convinced that Kruschen does everything we claim it to do, the regular bottle is still as good as new. Take it back. Your druggist is authorized to return your 75c. immediately and without question. You have tried Kruschen-salts, at our expense. What could be fairer? Manufactured by E. G. Kruschen, Ltd., Montreal, Quebec, Canada, 11700. Importers: McEldowney Bros., Ltd., Toronto.

WORLD HAPPENINGS BRIEFLY TOLD

Additional funds to combat tuberculosis among Indians will be asked from the parliament, a report of the Department of Indian affairs reveals.

Canadian Indians, in 1935, numbered 146,612, the Department of Indian Affairs reports. One-half are listed as Roman Catholics.

More than \$25,000,000 was spent by the British Government in the last fiscal year to help finance projects for providing work for the unemployed.

More definite protection for the agricultural debtor from foreclosure was sought by the board of the United Farmers of Canada, in session recently at Saskatoon.

The council of London, Ontario, has decided to support the Winnipeg resolution favoring the setting aside of the day after Christmas as a holiday.

The "rock pile" will be restored in all Ontario reformatories and jails in the belief that reformation is best accomplished by hard and productive labor. Prisoners will be provided with goggles to prevent the danger of eye-injury.

Restless CHILDREN

CHILDREN will fret, often for no apparent reason. But there's always Castoria! Harmless as the recipe on the wrapper; mild and bland as it tastes. But its gentle action soothes a youngster more surely than a more powerful medicine.

That's the beauty of this special children's remedy! It may be given to the tiniest infant—as often as three times a day. In cases of colic, diarrhea or similar disturbances, it is invaluable. A coated tongue calls for just a few drops to ward off constipation; or, for any suggestion of bad breath. Whenever children don't eat well, don't rest well, or have any little squall—this pure vegetable preparation is exactly all that's needed.

Fletcher's CASTORIA

SUNDAY SCHOOL LESSON

MARCH 14

STORY—ANNE'S FRIENDSHIP AND POWER

Golden Text: "Ye are my friends, if ye do the things which I command you."—John 15:14.

Lesson: Luke 10:25 to 11:54.

Devotional Reading: Psalm 91:1-7.

Explanations and Comments

Martha's and Mary's Friendship For Jesus, 10:34-42.—Jesus was a frequent guest at Bethany in the home of Lazarus, Martha and Mary. On one occasion Mary was sitting at His feet and listening eagerly to His words, when Martha, troubled about the preparation of the meal, came and said impatiently to Jesus, "Lord, dost Thou not care that my sister did leave me to serve alone? bid her therefore that she help me." Can you not see how troubled she was, and how unjustly she felt that she was being treated? So intense was her feeling that she rebuked her sister in the presence of their guest, and in asking Him if He did not care about her overwork, she rebuked Him also.

Jesus tenderly repeated her name, "Martha, Martha," thus showing His care for her, and then gently rebuked her, "thou art anxious and troubled about many things; but one thing is needful." Moffatt's translation reads, "one thing alone is necessary." Both sisters were used to sit at Jesus' feet (note the word "also," verse 39); and according to Moffatt's translation we may assume that both helped to prepare the meal, but Mary returned, thinking the fare prepared adequate. Martha, on the other hand, wished to serve a more pretentious dinner—one of many dishes—in order better to honor the Lord. The whole point of Jesus' words to her, then, was to warn her against herself. He did not wish the visit to turn her into a drudge. He desired her also to sit at His feet and learn.

"If you had seen Martha you would frequently have said of her doings, 'She would do more if she did less.' The woman was overworked. The busiest mother will do amazingly well for herself if she will withdraw from the ardent demands of the domestic circle and have ten minutes with her Lord. But I have no much to do! I know all about it, but you will do them better for the apparent waste. Deep communion gives us the power of less action. It conveys to the soul a calm assurance of God. The nerves are soothed and calmed and the soul is stilled."—J. H. Jowett.

"For Mary hath chosen the good part which shall not be taken away from her." "Not yours is bustling about, Martha, but hers is 'the good part' of ministering not to thy body's but to My spirit's need for sympathy and understanding. It will not be taken from her now by thy bidding her to help you, and it is of such a character that she will never lose it." Mary's gift was not so much sympathy as the power to detect in those whom she met what was the main thing to be sympathized with."—George Matheson.

"Speak low to me, my saviour, low and sweet From out the balcony, sweet and low, Lest I should fear and fall, and when Thou art Who are not moved by any that retreat— Speak to me as to Mary at Thy feet."—Mrs. Browning.

Best Comes Nothing. Even a little speck too small to see will lead to agonies which no words can describe. The walls of the breathing tubes contract and it seems as if the very life must pass. From this condition Dr. J. D. Kellogg's Asthma Remedy brings the user to perfect rest. It relieves the passages and normal breathing is firmly established again. Hundreds of testimonials received annually prove its effectiveness.

An archaeologist states that until eighty years ago, almost all the known remains of ancient Babylon and Nineveh were in a little glass case in the British Museum.

Internal parasites in the shape of worms in the stomach and bowels of children sap their vitality and retard physical development. They keep the child in a constant state of unrest and, if not attended to, endanger life. The child can be spared much suffering and the mother much anxiety by using a reliable worm remedy, such as Miller's Worm Powders, which are sure death to worms.

It is preferred that nurseries may eventually find their way into the manufacture of plastic goods, including material, and similar products.

Always keep Douglas' Egyptian Liniment at hand, ready to bring immediate relief to burns, sores and fevers. Stops bleeding at once. Prevents blood poisoning. Splendid for sore throat and sprains.

NO MORE ECZEMA
Hiding Ends Right Away
"I had eczema for several months. It kept me from my work and my sleep. I tried many remedies but nothing helped. I then tried Vicks VapoRub and it cured me. I am now well and happy."—John Smith, 1234 Main St., St. Paul, Minn.

Manitoba Mining Industry

Over \$10,000,000 in New Investment in the Industry

Hon. D. G. McKeown, Minister of the Department of Natural Resources for the Province of Manitoba, reports a twenty per cent. increase in Manitoba's mineral production for 1935 over the previous year, the total production amounting to value to \$5,420,515.

Capital invested in the Manitoba mining industry is now computed to be over \$62,000,000.

The year 1935 was the best yet in the mining history of Manitoba in the matter of advances towards mineral production. Mining expenditures that year were 15 per cent. over the previous year's figure of \$12,500,000.

Fruit acids, paradoxically, counteract the acid effects of certain foods in the diet.

Strong in Watch Industry

The watch-making crisis in Switzerland appears to have been reached. July, 1935, was the poorest month in years, only 114,000 cases being turned out. But the heaviest decline has been in pocket watches and automobile clocks. The clocks, most of which in former years were exported to the United States, have nearly disappeared from the market.

Cut Down Food Wastage
...by covering all perishable goods with Para-Sani Heavy Waxed Paper. Para-Sani moisture-proof texture will keep them fresh until you are ready to use them.
You'll find the Para-Sani sanitary knife-edged carton handy. Or use "Centre Pull" Packs in sheet form for less exacting work. At grocers, druggists, stationers.

Make Your Windows Pay

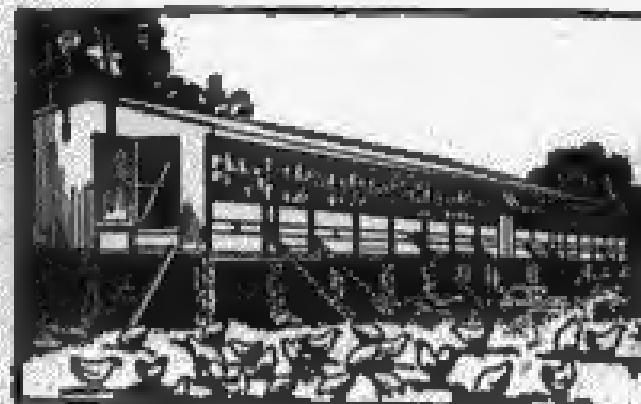

Invest in WINDOLITE Windows and you will be repaid a hundredfold in the health of your Poultry and Live Stock

WINDOLITE

THE ORIGINAL GLASS SUBSTITUTE

MAD IN ENGLAND SINCE 1911 BY ORIGINAL PATENT

This indestructible glass substitute is light and flexible, easy to cut and fit, will withstand extreme changes in temperature, keeps out cold and wet, but allows the full sunlight to enter, by shading the health-giving Ultra-Violet Rays, which do not penetrate ordinary glass.

Canadian breeders of poultry and livestock are finding Windolite a most satisfactory and profitable investment. Young chickens and turkeys are entirely free from leg weakness and disease and will thrive in confinement under Windolite. Windolite comes in rolls any length, but 25 inches wide only.

SETTLEMENT OF INDIAN QUESTION PEACE TRIUMPH

New Delhi, India.—When India awoke on the morning of March 4, it found peace on its doorstep.

Overnight, Mahatma Gandhi, with the vision of a prophet, had led his inviolable sleeping multitude from the practices of war to the path of peace. He was the condenser of Viceroy Lord Irwin, who, less than a year ago, jelled the mystic agitator for challenging the authority of the British Empire, and an accord was reached which ended the year-old civil disobedience movement.

Nationalist circles naturally regard the truce as a triumph for Gandhi's doctrine of non-violence which, as Subhaschandra Tagore said, introduced a new technique into international relations.

While the terms of the agreement have not been officially published, it is understood they are as follows:

1. Nationalists will abandon civil resistance.

2. Indians along the coast will be given the right to manufacture their own salt and there will not have to purchase it from the government monopoly.

3. Property of congress adherents which has been confiscated because of non-payment of taxes will be returned, with certain reservations.

4. Nationalists will be permitted to do picketing within the normal laws of the country and will be permitted to conduct boycotts so long as they do not aim specifically at British goods—in other words, if their aim is to promote local trade and industry.

5. Nationalists who were imprisoned for civil disobedience activities will be given amnesty and all government repressive measures will be withdrawn.

6. Nationalists drop their demand for an investigation into alleged police brutality.

7. The government was from then onward to work for qualified dominion status in a second round-table conference.

While the Nationalists have not actually gained much by accepting the settlement, it is pointed out on the government side that Great Britain gains commensurate advantages.

The most important gain in this direction was the point wherein the Nationalists agreed to conduct themselves at the next round-table conference in the spirit of peace of consultation questions decided by the first round-table meeting in London, England.

This commits Gandhi to the principle of a federation of Indian responsibility, but with British safeguards covering finance, defence, foreign affairs, the position of minorities and the discharge of India's national debts.

The agreement was hailed with approval by British and moderate Indian newspapers. The Calcutta Statement characterized it as just as decisive for the world as the Armistice in 1918, adding that the instrument has the possibility of solving two of the most menacing world problems today—the clash of color and the class economic struggle.

Plans Polar Flight

Great Zeppelin May Carry Scientists Over Polar Sea

New York.—The Great Zeppelin will make a polar expedition of exploration in July, if Dr. Hugo Schuster succeeds in a plan to finance the project.

The great commander of the big dirigible arrived here from Germany. The ship would proceed from Friedrichshafen to the Arctic by way of Longueville, he said, and by over France, Great Land and St. Nicholas Land with eight or nine scientists aboard.

British Motion Picture

London, England.—His Majesty has presented to the nation a British moving picture at Hampton Court Palace. The story will be historical in nature, dealing with Henry VIII and Cardinal Wolsey, written by Mrs. Winifred Graham.

Naval Parity For Italy

New United Frontiers Party With France In Naval Construction

Rome, Italy.—Italy gains practical parity of construction with France over the next five years under the terms of the British-France-Italian naval accord as disclosed unofficially here, and in 1934, when the accord expires, will be in a better position relative to France than she is today.

The principle of parity which broke up the London conference as far as Italy and France were concerned is not settled by the new accord but is postponed until 1934.

Immediate naval construction programmes are put on a practical level and as harmonized as to guarantee each country against surprise and to permit accurate check on annual tonnage laid down. The annual programmes are reduced from more than 50,000 tons to an average between 21,000 and 22,000.

Italy made some sacrifices, the terms of the agreement show, but she believes they will not affect the national security and that they are balanced by sacrifices on the part of the French.

The accord will give France, in 1934, a superiority of 200,000 tons, but Italy discounts this, pointing out that 24,000 tons of that total will be obsolete while the Italian obsolete tonnage will be only 2,000.

Moreover, the French have certain types of ships which the Italians believe unnecessary to their navy.

A unique point, according to the terms disclosed recently, is that both countries are permitted to build two 20,000-ton cruisers. Another is the decided superiority the accord gives France in submarines—21,000 tons as compared with 10,700 for Italy. Italy, however, reserves parity in this category with Great Britain, the United States and Japan.

Awarded McKee Trophy

Squadron Leader J. E. Tullidge Is Winner For 1929

Ottawa, Ont.—Squadron Leader J. E. Tullidge, M.C., of the Royal Canadian Air Force, stationed in Ottawa, has been awarded the McKee Trophy for 1929. It was announced here by Hon. Donald Rutherford, Minister of National Defence. The trophy is awarded annually to the Canadian flyer who renders the most meritorious service in the advancement of aviation.

During 1929, Squadron Leader Tullidge was the pioneer of all east and west air mail routes from the Atlantic to the Pacific. In the first four months of the year, he made an aerial survey of the Rocky Mountains, flying over 10,000 miles.

Squadron Leader Tullidge joined the Royal Flying Corps in 1914, and served in France with No. 48 Squadron. He was awarded the Military Cross and bar for gallantry. In 1929, Squadron Leader Tullidge joined the Canadian Air Force and is now superintendent of airways in the civil aviation branch of the department of national defence.

Farm Loans

Applicants To Commence Work On Valuations In May First

Ottawa, Ont.—May 1 next, has been fixed as the date on which applicants this season will begin the work of valuation on applications for loans to the Farm Loan Board.

This decision was made at a meeting of the Farm Loan Board, President R. B. Bennett, who is also minister of finance, presided.

Loans are made to applicants on farm lands and buildings at the rate of 4% per cent. under the Farm Loan Act. When applications for loans are received by the board, they are, if seriously looked upon, passed to appraisers for valuation.

British Estate Settled

London, England.—The British ambassador will benefit to the extent of nearly \$15,000,000 in the estate of the late Sir David Yale, head of Andrew Yale and Company, and probably the wealthiest Briton in India, who died in 1928. The court of appeal ruled that Sir David was legally domiciled in the United Kingdom.

YOUTH AMERICA

Donald Dale Alexander, of Kansas, who is a claimant to the throne of the emperors, has just arrived in America on a yacht.

Dryden Wins Dog Derby

Russick Was Second and Earl St. Gedard Finished Third

The Fox. Man.—Sturdy Earl Dryden was crowned king of Western Canada dog mushers for the second year in succession.

Dryden, battling as a try trail, almost bare of snow, and carrying four injured dogs on his sled, came down the winner of The Fox 300-mile non-stop derby, winning the premier prize of \$1,200 in cash and the Walter Geyse trophy. His time was 26 hours, 30 minutes, 20 seconds.

While far behind the record of "Shanty" Russick, established in 1924, when he finished in a little more than 24 hours, Dryden's time was remarkable when the condition of the trail was taken into consideration.

Earl plodded across the Seaboard line covered with perspiration and nearly exhausted from his struggle with the treacherous northland trail. "Shanty" Russick was second, 14 minutes behind Dryden.

Earl St. Gedard finished third, 26 hours, 4 minutes and 20 seconds.

Pioneer Settler Dead

Death Survey New Service In Settlement Of 1929

Vancouver, B.C.—James Harvey, aged 88, who was the first settler at what is now Indian Head, Sask., died at the home of his son, Dr. J. E. Harvey, here, following a prolonged illness.

In the rebellion of 1885, Mr. Harvey had three transport teams working near North Battleford, Sask., and he himself saw service at the Battle of Batoche. He came to Kelowna, B.C., in 1890, and at one time was vice-president of the Okanagan Fruit and Land Company. He resided at Kelowna until his wife's death, at which time he came here.

Fire Destroys Mail Train

Plank Of Seven Trains Lost In Steamers Play In Winnipeg

Winnipeg, Man.—A fleet of seven Western Canada Airways' planes and a Fairchild cable machine, privately owned, were lost in a fire that totally destroyed the company's large hangar at Stevenson Field, St. James, causing damage estimated at about \$150,000. Much higher earlier estimates were completely discounted by company officials.

Flames broke out following an explosion in the hangar. Company officials, meeting with Fire Commissioner Edward McGrath, were unable to determine what had caused the blast.

More than a dozen mechanics and workers escaped from the building without injury, as the blaze quickly spread. No one was seriously injured, though minor injuries were reported having been suffered by fire-fighters. Three automobiles, standing inside the structure, also were destroyed.

Witnesses of the outbreak believed the blast occurred in the gasoline tank of one of the planes. Everyone in the building hastily fled as the resulting flames crept along the gas-soaked floor to other machines. When the first Winnipeg fire brigade arrived, eight planes were in flames, several standing just outside the hangar. Firemen were hindered from doing effective work by lack of water pressure.

Two small Laed mail planes, delivered only a short time ago, were among the flames-wrecked debris; and the pride of the company's fleet, a large tri-motored Fairchild cabin machine, also was destroyed.

Eight hundred gallons of gasoline, stored outside the building, failed to explode, though the tanks broke into flames shortly after the blaze started.

Russian Trade

Trade Canada Feels In Retelling To Trade With Soviets

Montreal, Que.—For Canada to refuse to do business with the Soviets because Russians have their own idea of government is as illogical as refusing to trade in Italian grand opera because Mussolini is a dictator, in the view of A.M. Joseph Schubert, widely-known Labor party politician. By the Canadian embargo on Bolshevik goods, he said, Canada throws away a market of 162,000,000 people while Great Britain, the United States and other countries feed on it.

Canadian Is Appointed

Ottawa, Ont.—Robert M. Coats, Dominion statistician, has been selected by the League of Nations to be one of a committee of international experts to co-ordinate the statistics of the world. Mr. Coats is not representing Canada, but has been chosen by the League in recognition of his outstanding ability.

GIFT OF BEAUTIFUL KAMMOOS

This magnificent set of diamond and enamel earrings for pierced ears is being sent to England immediately as a presentation to Vancouverites by the women of Canada. Each earring consists of 24 diamonds and one emerald. Miss Mildred Bennett, sister of the prime minister of Canada, is co-chairman of the Vancouverian Women's presentation committee. In centre is hand-mounted platinum ring with large oval-cut pearl, the whole is a solid gold case, also included in presentation from women of Canada.

MARKETING OF WHEAT TO BE INVESTIGATED

Ottawa, Ont.—While no official announcement has yet been made by the government in connection with a royal commission to investigate wheat marketing, it is understood that the government will likely institute such a body. Based in Ottawa is that the membership of the commission will comprise three persons, one representative of the farmers of the prairie provinces, a second representing the Winnipeg Grain Exchange, and a third acting for the Dominion Government.

It could not be confirmed that the government had sought the services of Sir Joseph Stump, internationally known English economist. Hon. Robert Weir, Minister of Agriculture, however, declared that he had been in touch with someone in England, the identity of the individual not being disclosed. Circumstances surrounding the railway situation in England had caused the person indicated to forego the prospect of acting for the Dominion. It is believed, but not confirmed, that this individual was Sir Joseph Stump.

One of the purposes of the commission would be to see whether the present system of trading in grain futures has, or has not, an injurious effect on the marketing of grain.

Making More Butter

Butter Supplies Now Almost Meeting Local Demand

Vancouver, B.C.—Increased attention that is being given to dairying on the prairies is revealed in the fact that better supplies from the three prairie provinces are almost meeting Western Canadian requirements. Attention is drawn to this new condition by the relatively small imports of butter from Australia and New Zealand at the present time.

Last week the "Aurora" brought 725 boxes of butter to Vancouver from New Zealand, and 269 for Victoria, 1,842 from Australia for Vancouver, and 111 from the Fiji Islands, or a total of 4,779 boxes.

On February 26 of last year, the imports from the same sources were 15,515 boxes from New Zealand to Vancouver, and 1,905 from Australia, and 90 from the Fiji Islands, or a total of 20,205 boxes.

Vancouver dealers report that Alberta supplies are meeting the requirements in Vancouver, and that most of the butter imported since November is still in storage. Under an agreement between the importers and the Canadian Government none of the Australian butter can be sold at a price below 32 cents a pound, and the Alberta makes are being marketed just slightly under that figure.

Slight Drop Reported In Wheat Shipments

Movement Slowed Up For Last Week In February

Winnipeg, Man.—Movement of Canadian wheat overseas, maintained at a rate better than 4,000,000 bushels weekly since the first of the year, slowed up the last week in February, and at the same time the drop in the visible supply was less than average. Reports for the week ending February 27, were given as 1,664,000 bushels in a report issued by E. A. Russell, statistician to the Dominion Board of Grain Commissioners.

Of the week's shipments, 1,264,100 bushels was shipped from Pacific ports in Canada.

Visible supply of Canadian wheat decreased during the week by 1,047,500 bushels and totalled 120,000,000 bushels.

Europe Has Struggles With

Bank, Switzerland.—An international mortgage bank capitalized at \$5,000,000 was created for the purpose of extending long-term credits to European nations in need of such financing. It will work in close cooperation with the International Bank for Reconstruction.

New Connecting Rod Bearing

Twelve thousand times a minute each connecting rod bearing of an auto engine is under pressure when the car is driven 40 m. p. h. These strains demand the highest quality of materials and workmanship in the manufacture of bearings. What is believed to be one of the best methods is used in the manufacture of 1931 Oldsmobile wherein the danger of air bubbles or weak spots forming in the habit with which the bearing is lined, is eliminated. The connecting rod is fastened to a wheel with the large bearing of the rod locked in the center of the wheel. The narrowest amount of habit is forced into the bearing and as the rod revolves 1100 times a minute, the habit is thrown by centrifugal force to its proper position.

McLaughlin-Buick Leads.

During the 5 month period from the time it introduced its present line of Straight 8 models in the last week of July 1930 until the end of the year, the Buick Motor Co. sold one and a half times more Straight 8 cars than its nearest competitor sold during 1930. And because of the recent announcement that the present 1931 McLaughlin-Buick Straight 8s will be continued thru the summer and fall months this year instead of being replaced with a new line in August, General Motors executives expect the McLaughlin Buick sales figures will exceed the figures for the same months of last year.

Here and There

W. L. Leach, 2nd, No. 1000 44th from Port Kells, B.C., sold 27 eggs in 245 cases, qualifying her as champion egg layer. The eggs weighed 12 pounds, just two times her own weight.

In the past fiscal year in Nova Scotia there were 131 companies incorporated with total capitalization of \$2,367,000, an increase of 15 new companies over the previous year.

Dr. Ross E. S. Bennett, Prime Minister of Canada, and a graduate of Dalhousie University of 1888, was recently presented with a leather-bound script copy of recognition and regard of scientific achievement of the same year.

Thomas M. Kipp, chairman of the Industrial Development Board of Manitoba, reports that since the inception of the Board, Manitoba's industrial payroll has been increased from \$12,000,000 to \$22,000,000.

Miss Margaret Stevenson, of Edmonton, has succeeded in the crown of the best Girl Scout Winter Carnival, following Miss Doris Forbes of Vancouver, last year's Queen. The election was the chief feature of a very successful meet.

W. E. Brice, of Montreal, has been appointed Development Engineer, Department of Development, Canadian Pacific Railway. He succeeds G. M. Hunt who was recently promoted to Assistant Director of Development, with headquarters in Winnipeg.

The 42,500-ton Empress of Portland, which is scheduled to sail on her maiden voyage to Quebec, May 29, is the largest vessel built in Great Britain since pre-war days and the largest ship plying between British Empire ports. She will also be the largest vessel ever to make a world cruise.

Total increase in railway taxes during the 24 years from 1896 to 1920 in the United States was from \$1 million to 121 million dollars, says Dr. Parmelee, Director, Bureau of Railway Economics. Thus, he asserts, has had an unfavorable effect both on industries and individuals.

The annual University of Montreal tour across Canada which has been a feature of the educational life of the University for the last six years, will be extended to include Alaska and the Yukon Territory for the season of 1931, according to Canadian Pacific Railway announcement recently.

Shipped by Canadian Pacific across Canada, 27 head of purebred Jersey cattle, four pigs, four mountain goats and sheep were swung aboard the freighter Wabigoon for New Zealand recently. Captain Flynn, skipper of this new ship's Ark, wasn't worrying. He said he had handled tigers as well as snakes and stokers in his time.

J. H. Evans, Deputy Minister of Agriculture for Manitoba, states that "as no branch of farm production in Manitoba has the price been so well maintained or the volume of business increased so much as in hogs. Manitoba produced well over one-third of the total hogs crop in Canada, the quality of which was unexcelled; and at the present rate of increase Manitoba will be the largest producer in the Dominion next year." Tot.

CHAPTER XII—Continued

The color printed in Gay's cheeks. All her sympathy for James Halliday rushed over her as she said, her voice colder than Nick had ever heard it: "It was no joke, Nick. Her husband was in that back."

"How—horrible!"

Nick raised himself on one elbow; then sank back limply.

"I hope she'll never know. It would kill her, because—well, she was laughing when we drove up beside him. I remember motioning her to stop, for the window of the back was open, and I saw a hand reach out to pull down the shade. Oh! what a situation! You—you don't suppose he'll tell her, do you?"

"Probably not. He keeps his feelings pretty much to himself, I think; but if he cared for his mother (and he did, Nick, I could see that), it must have been something of a blow."

"It was ghastly. Why did he tell you?"

"He wanted me to know that you were safe at that time anyway. He said he saw you, and I unfortunately asked where."

"Poor fellow! Do you know, Gay, I think they're unhappy. I've thought so all along. At first I imagined their trouble was due to his beastly cynicism, but—"

"He's not always cynical," broke in Gay defensively. "There wasn't a trace of it that night; he was only kind. If they're not happy, the fault isn't all his, Nick. Julie says—"

"Gay, how can you listen to Julie's chatter?"

"I didn't. It sifted through to me when I was thinking about you. No one can stop Julie when she gets going; and I was too unhappy just then to care about the ethics of the case. Let's forget it, Nick. I don't want to think about that time, ever again. It was a nightmare."

For a while there was silence, then Nick said thoughtfully: "I could stand all of it, Gay, if we hadn't run down that child."

He shuddered at the memory, and she said: "Don't think about it, dear."

"No, when I help thinking? It was a little girl, Gay, hardly more than a baby, and I've always wanted a little girl. She was choosing a letter. Perhaps she was afraid we'd run over it—anyway, she ran straight in our path. If I'd seen her a moment earlier—but I wasn't driving, and when I caught the wheel, well, I had to think so, but it seemed to me that Mrs. Halliday almost kept me from turning. She had held very firmly with both hands, and the child was so near—"

He closed his eyes, and Gay protested: "Nick, you couldn't talk about it. It will make you sick. Yes, surely, were not to blame; and the child is having the very best of care. Mr. Halliday has been there every week, sometimes often. He says she's a very little thing and is doing splendidly. Besides, she wouldn't have lived an hour if it hadn't been for you. Everyone says that."

"I know. It makes me feel responsible for her in a way. I sometimes wonder (she was a little girl, you know), what the little thing has got to live for. I didn't like the face of that woman who bore her. It was hard as nails. Nobody seemed to care—that's what made me so determined to save her. She was somebody's baby once, Gay."

Gay moved nearer, and sleeping, kissed his cheek.

"There!" she said cheerfully, "as Uncle Sam says: 'Don't you go to worryin' any more than you can help. It's time for baby's nap, and you can entertain Sonny for a while. He's a sure antidote for melancholy.'"

Nick watched her go down the path to the sand pile—lift her baby, and turn again toward the house; while Sonny, carefully carrying a mud pie in his chubby hands, trotted at her side.

"It's a present," he announced, holding the delicacy on his father's knee.

"ICH give you an appetite."

"Here it will!" said Nick, grinning. "Maybe I'll get as fat as Uncle Sam."

Sonny shook his head.

"Uncle Sam's too fat, Daddy. He

has a head all stomach, and no skin at all."

Nick laughed.

"Well, from getting indigestion I guess it'll be some time before I catch those proportions! I don't know as this is any big deal, but you could teach me some. It's the best I can do."

"Sonny wouldn't think you down, Daddy," said the little boy seriously. "Sonny loves you plenty."

"Come here then, and show me how much 'bobby' is. I want a bag the worst way."

"A big bag, or a little one?" asked Sonny, examining a sheep and reaching one small elbow on Nick's knee.

"The kind you give Mother when you love her best."

"That's the big kind—only you have said, Daddy, and it might hurt. Julie says sick folks is bad of bobby."

"I don't feel bobby in the least," Nick answered seriously. "Let's risk it."

It was this afternoon that James Halliday interrupted, coming through the gap in the hedge, and casting himself in the chair that Gay had vacated. Nick snatched Sonny's arm in order to stretch out a lean hand, which Halliday gripped hard.

"I won't stay long enough to tire you," he said. "I want some advice from Mrs. Halliday. I'm wondering if I can get hold of that nurse who has just left you."

"A nurse? In anybody's back?"

"I'm moving that little girl from the hospital to-day," answered Halliday. "She was able to leave, and I didn't think she'd get proper care from that Mrs. Williams who bore her. Don't like the woman's face; and I've a notion" (with a faint smile), "that she doesn't like mine! Mrs. Halliday?"

"I'll be back for a month. She's gone on a strike with some friends; and it struck me that the child would be better off here, with a good nurse. I had to go through some red tape with the authorities; but anyway, I've got her away from Mrs. Williams, which is the main thing. The child's afraid of her. I don't believe she's been well treated."

"I'm not surprised. The few words I had with the woman showed me that I'd hate to have a child of mine under her care. But—won't it make a lot of trouble for you, Halliday? I suppose there are good places where you could send her."

"No place where she'd have a sleeping porch and a nurse to her. I—I want her to be happy. It seems terrible for a child not to be happy, doesn't it?—and I feel, somehow, responsible for her, you know."

"Well, that's mighty fine of you," Nick began, when Sonny interrupted: "He'll make mud pies for her. Want one?"

He lifted the pie which was to give his father an "appetite," and offered it to the caller.

Halliday took it rather awkwardly, and said to Nick: "Am I supposed to eat the thing?"

"Just pretend not," explained Sonny kindly, while Nick smiled a bit at Halliday's ignorance of childhood's ways.

"With my fingers?" asked Halliday, smiling himself, as he warmed to the task.

"Daddy says 'no sometimes, Mrs. bobby,' said the little boy, but Murray says it's not nice manners. Just pretend."

Halliday "pretended," smothering his lips with relief as he bit it down.

"It's blueberry," said Sonny. "How much your taste?"

Nick roared, but Gay moved James Halliday from the embarrassing situation by appearing in the doorway. He bowed politely and offered her his chair, stating his errand as he did so.

"I'll call on Miss Oakbury at once," she said. "Oh, Mr. Halliday, I think that's a wonderful thing to do! It will give us all a chance to help the little girl. How old is she?"

"They say she's four; but she doesn't look so big as this boy of yours. I think she's been—well, if not treated at least treated with indifference. I've been there twice when Mrs. Williams came in, and though she made a fuss over the child for my benefit, it was plain that the little thing was frightened."

"Oh, dear!" said Gay. "Sonny you can keep them from sending her back to—when she gets well?"

"She won't go back there if I have

The Adventures of CAPTAIN JIMMY and his Dog SCOTTY

WHAT CAME BEFORE.—Captain Jimmy and his dog Scotty set out in their Tickers airplane to see the world. Captain Jimmy is a brave member of the Royal Air Force. Scotty is a brilliant Scotch terrier who, as a pup, adopted Captain Jimmy, and stayed with him through all his adventures since. Just out of Calgary, Jimmy, Scotty, and their good plane "Rough" ran into a violent storm.

They have that rain did not down; and the wind whined and whistled out of a black stormy sky. The good plane "Rough" plunged and

reared like a huge dragon. "Scotty," Jimmy called, "be careful! You must never make a sound, though he must have been scared white beneath his black coat. Suddenly we dove forward into an air pocket and the whole plane dropped away from under us for 30 or 35 feet. Perhaps you have been in an elevator sometimes when the operator has let it drop quickly. That's quite like the sensation you have when a plane hits an air pocket and she drops from under you. It makes one's stomach a bit uneasy.

Meanwhile I was banking and trying to get her nose down into a little valley with a level looking bottom. I had cut down the motor, but even at 70 or 80 miles an hour I was having trouble. Imagine for yourself hitting a bump at 80 miles an hour, and you will have some idea how it feels to run into an air pocket in a plane, for you know, the air has moved in a storm, very much like water has, and in some places it's quite dense, while in others it is not dense at all—in fact, the air is so thin in spots that it will not hold the wings of your plane.

Let me tell you that I was worried. I don't mind a squall or a storm when I am out in the open, but among the foot-hills—well, that's a different situation. I headed down as best I could and down we went. Sometimes straight down, sometimes sideway, then a gust of wind would pick us up and whirl us about. I don't know whether we'd land in one place or a point at a time.

But land we did—boom—boom—boom. We tumbled along the ground. The rain came down in sheets and I could not see ten feet ahead. I started by guess only—and what a guess! Suddenly ahead of us there loomed a tall tree, I swerved as far to the left as I could to avoid a head-on collision but I couldn't clear it. Crash! We crashed our wing against the tree—the nearest tree I ever saw. It was almost in the exact center of a

wide grove rather—and it was the only tree within many yards of us. With all the rest of the whole world to grow in, of course it had to grow right there, and, of course, I had to stop straight for it.

I remember if you have ever crashed into something while going thirty or forty miles an hour? I hope not. But if you have, you can understand what happened to me. The straps hold me to my seat, but I was so shaken up and bruised that I could scarcely move. And Scotty—the poor terrier—popped out of the cockpit like a shot out of a gun, falling through the air he went, and landed in a thick clump of grass, where he rolled over—out once, but a dozen times. Finally he stopped rolling, and I untangled myself from what had been an airplane and went over and picked him up. A carrier pup you never saw. It hurt to stand up and worse to sit down. Soon, by good luck, the rain stopped, and we scratched the wet top of some pine needles and sniffed around as cautiously as possible to find things over.

That night was raining on, and we had to find somewhere to sleep. When I asked Scotty about it, he wasn't even the least bit interested. He kept right on looking like a broken and shaggy dog. Anyway, a dog doesn't care much where he sleeps. He simply follows his tail around two or three times, and settles down, and he's in bed.

That sort of a bed doesn't appeal to me much, however, so I got up and started over to the little old deserted log cabin. It was only a rough little cabin some woodmen had built—and was really as lonely as could be—but it looked mighty snug and happy to me right then. The door was really sinking behind the hills. A strange sound drifted down from the hill that covered slopes nearby. A great barred Owl went whoo—whose back in the dark timber—perhaps you have heard a barred Owl? It sounds like a hungry wolf and a wildcat rolled into one—and, of course, while you know it's just a barred Owl, it doesn't seem to help much, for in spite of all you know, you're scared all the same.

Well, boys and girls, that little cabin looked mighty good to me, and I started up the little trail to the door. Suddenly the bushes began to move. Yes, it moved just like as if some heavy animal was trying to peer out at you without being seen. Then there was a moan. A moan you never heard, and the biggest, heaviest bear ever, hops to see lumbered out and stood looking at us.

Borden's Chocolate Malted Milk

The health-giving, delicious drink for children and grown-ups. . . . Pouch and half pound tins at your grocers

to adopt her myself," answered Halliday grimly. "I—I can't understand it, but the child seems to—like me. Usually children don't."

(To Be Continued.)

Canadian Apple Harvest

Canadian apples showed a large increase during the 1939-40 shipping season (covering the 1939 crop) as compared with the previous year, 1,727,000 barrels having been exported during the season just closed as against 1,591,000 barrels the year before.

Feederfish Of Pacific Salmon

Are Valuable Atlantic Coast Salmon In Many Particulars

Unlike the Atlantic Coast salmon which spawns several times, the Pacific salmon spawns but once and die immediately thereafter of the river spawning ground. All the five varieties of Pacific salmon are members of the family (Oncorhynchus), but show interesting differences in length of natural life span. The pink lives only two years; the coho, three; the chum, four; the sockeye, four to five; and the spring, six to seven.

FREQUENT PAINS?

NEVER let a throbbing head interrupt your shopping! Or other pain that Aspirin ends so quickly. These harmless tablets are an antidote for the most acute pain. Relief is almost instantaneous. Taken in time, they will break up a cold and head of discomfort. They'll relieve your suffering from neuralgia, neuralgia, or the like, at any time. Thousands of

women depend upon Aspirin tablets every month to spare them from those pains peculiar to women. These tablets do not depress the heart; they may be used so frequently as there is need of their quick, comfort. So, it's folly to endure any pain that Aspirin tablets could relieve so promptly. Get the genuine, which is always to be had at any drugstore.

GAS relieved

WHAT most people call indigestion is usually excess acid in the stomach. Food has rotted. The fastest remedy is an alkali which neutralizes acids. But don't use crude boric. Use what your doctor would advise.

The best help is Phillips' Milk of Magnesia. For the 50 years when its invention, it has remained standard with physicians. You will find nothing else so quick in its effect, so harmless, so efficient.

One teaspoon, spooned in water

neutralizes every trace of the volume in acid. The results are immediate with no harmful after-effects.

Once you learn this potent way you'll never deal in any other manner with the headache, gas, bloating, nervous, distress, indigestion, biliousness, etc., due to an over-acid stomach and bowels.

Be sure to get genuine Phillips'. It is always a liquid; never made in tablet form. Look for the name Phillips on the bottle. All druggists sell it. R-30.

NOTICE

RICHARD ROBERTS,
Solicitor of Stony Plain in the Province of Alberta.

TAKEN NOTICE that Orlando G. Balaard, through his solicitor George J. Bryan of Stony Plain in the Province of Alberta, alleging he has paid you the full purchase price agreed for by the hereinafter mentioned agreement, has commenced an action against you in the Supreme Court of Alberta, in which he claims against you specific performance of an Agreement for Sale, dated the 2nd day of July, 1933, made between you and Frederick W. Lundy as Vendor and Grantor, W. Bell as purchaser which Agreement for Sale was duly assigned to the said Orlando G. Balaard on the 6th of January, 1934, by delivering to him a transfer of the N.W. 1/4, Sec. 18, Tp. 36, R. 1, west of the Fifth Meridian, or for an order vesting the said lands in the plaintiff, AND FURTHER TAKEN NOTICE that you are required on or before the FIFTH DAY OF APRIL, 1934, to file in my office in the Court House at Edmonton in the Province of Alberta, a Statement of Defence or Demand of Notice that notice of any application to be made in the action is given you, and serve a copy of same upon the Plaintiff's solicitor, and in default of your so doing, judgment may be filed against you without further notice.

This notice is published pursuant to the Order of the Master in Chancery dated the 25th day of February, 1934.

I represent the Wawanesa Mutual Fire Insurance Co., the Hartford Fire Insurance Co., and Fidelity Auto Insurance Co.

Before the P. M.

There were but two cases before Magistrate Williams at the local Court on Monday. That of Joe Thomas of Wintburn district, an account of which was given last week, was given a seven-day adjournment. The accused was admitted to bail in the sum of \$200. This amount being put up by a Stony business man.

Mike Crisen, of the South Carrol district, charged with cutting and removing saw logs from the property of Edmonston Beach Park, was fined \$5 and costs. Mr. Jack Barrie has been annoyed for some time by persons cutting and removing the trees on his property, and was forced to take this means to stop the thefts.

Larger Municipal Areas.

In the Legislature, last week, Hon. R. G. Reid, Minister in charge of the Dept. of Municipal Affairs, explained in reply to questions that an investigation is being made with regard to the advisability of larger municipal units on the basis of an Act passed two years ago. A wish for such enlargement has been expressed by several municipalities, the Minister added, and educational work in this direction is now being carried on.

Mixed Farming Meetings.

The Canadian National Ry's colonization branch in conjunction with the Dept. of Agriculture, held a series of mixed farming meetings last week in Onoway and Sangudo districts, where farmers took a keen interest in the events. Swine and cattle raising were the leading subjects discussed. At Sangudo 33 farmers attended. At Onoway, despite the storm, 50 attended, including a number of high school students from nearby farms.

Wheat Prices.

R. H. Thompson of Wildwood, in a letter to the Journal, says in part: "If the surplus wheat is responsible for the present prices, why did private grain dealers pay \$1.75 a bu. in 1929 when the Pool was paying only \$1.00? Their elevators were all full; they were paying members 2c a bu. to hold their wheat; the railways would not accept any more shipments. Argentina had boatloads in England, no room to unload. Now why was the private dealer paying \$1.75 under these conditions? I claim this was a bribe to get Pool members to break their contracts. This plan cost the grain gamblers a lot of money and it did not break the Pool, as other tactics had to be used. It is a safe agreement that, if the private dealers could raise the price while there was a surplus, they could lower it also under similar conditions. In doing so they would hurt the credit of the Pool and all their elevators at a price less than the cost of production. I ask anyone to disregard the fact that this explains the present situation. Now for the non-Pool farmer's part—if he would join the Pool the private dealer would be left out, and we would all get a reasonable price for our wheat, same as we did before the private gamblers with the official farmers decided to break the Wheat Pool support."

When Economy is a Prime Consideration

NATURALLY, economy is an important thing to consider in deciding what car the family should buy. And from this standpoint, the Chevrolet Six is a very practical and satisfying choice. New low prices make Chevrolet's six-cylinder smoothness

and 50-horsepower performance available to new thousands of motor car buyers. And due to its low cost for gasoline and oil, its long life and freedom from repairs—the Chevrolet Six will serve you economically for tens of thousands of miles.

PRICED FROM
\$610

at Factory, Oakland
Taxes extra

Chevrolet's policy has always been one of economy in the sense of the G.M.A.C. plan of delivery—maximum value of delivery—maximum value of delivery—maximum value of delivery.
